

inclined roof encasements

Nida plasterboards are a perfect solution for constructing drywall structures under pitched roofs, which can serve as fire protection elements. Such roofs belong to the key load-bearing elements of buildings, which, owing to the characteristics of the material they are constructed of, which is timber, are susceptible to combustion and spread of fire.

Apart from protection against fire, utilisation of finishing materials such as Nida plasterboards provides aesthetic covering of the wooden structure of a pitched roof, and

enables installation of insulation material in the spaces between rafters.

If there are any protection requirements concerning pitched roofs for commercial buildings, it is necessary to utilise Nida Ogień Plus type DF fire protection boards, which, owing to their specialised structure and composition, provide fire protection up to class REI60. Such encasements require application of all the system components, such as the system steel frame, installation accessories, and joint fillers.

⁵⁾ As an alternative the Nida Woda should be utilised.

⁶⁾ As an alternative the Nida Woda Ogień Plus should be utilised.

⁷⁾ For the Nida Twarda plaster-particle boards with fibres the Nida Max gypsum putty should be utilised.

⁸⁾ Application acc. to the requirements.

The standards concerning the amount of utilised material do not cover the loss of the material.

nida Dach

Fire resistance class:
REI45
REI60

Heat transfer coefficient U:
0,22 W/m²K

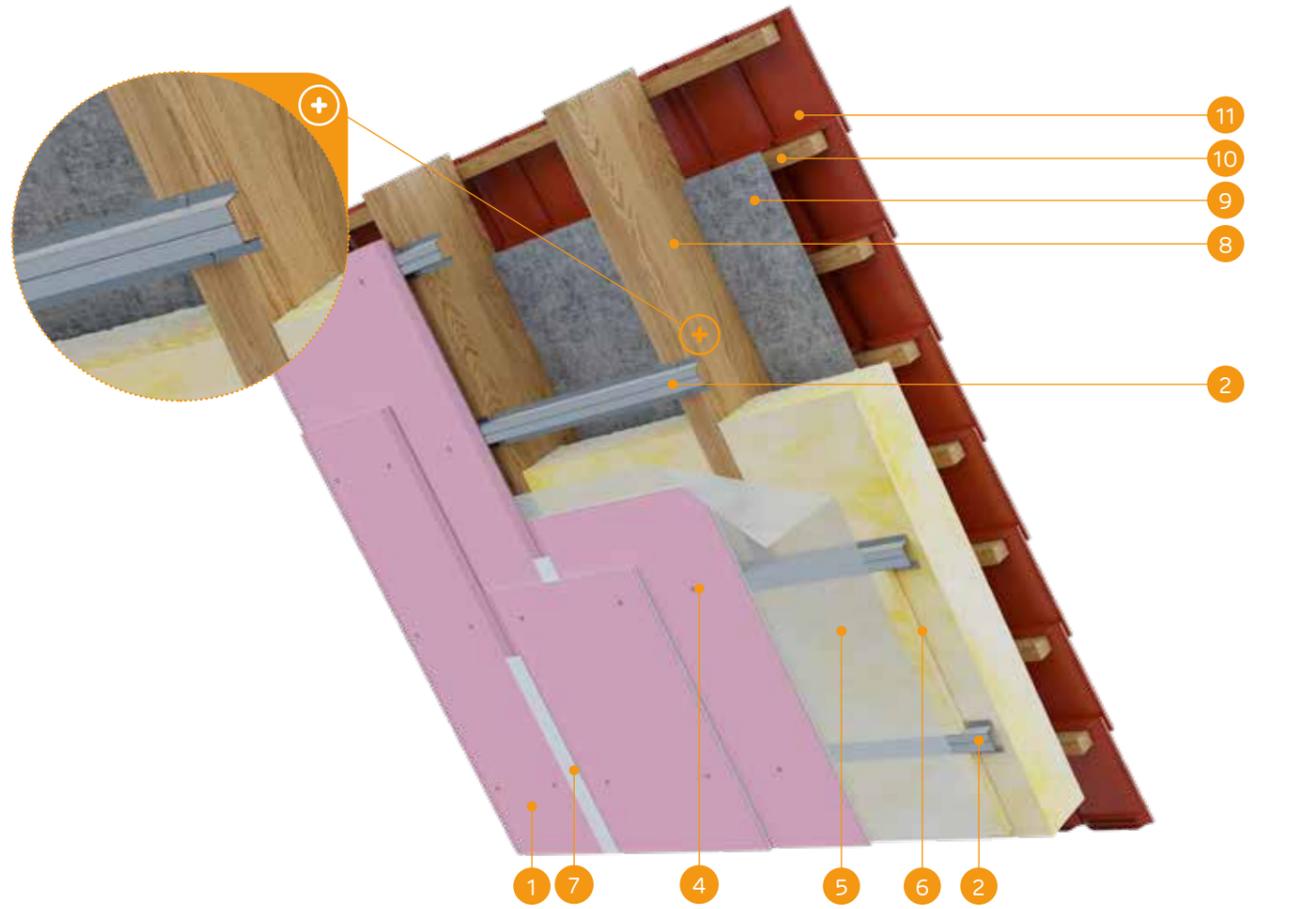

The minimal suspension height:
40 mm

Weight of 1 m² of encasement:
19,0-42,0 kg

Number of related document:
PN-EN 1365-2:2014-12

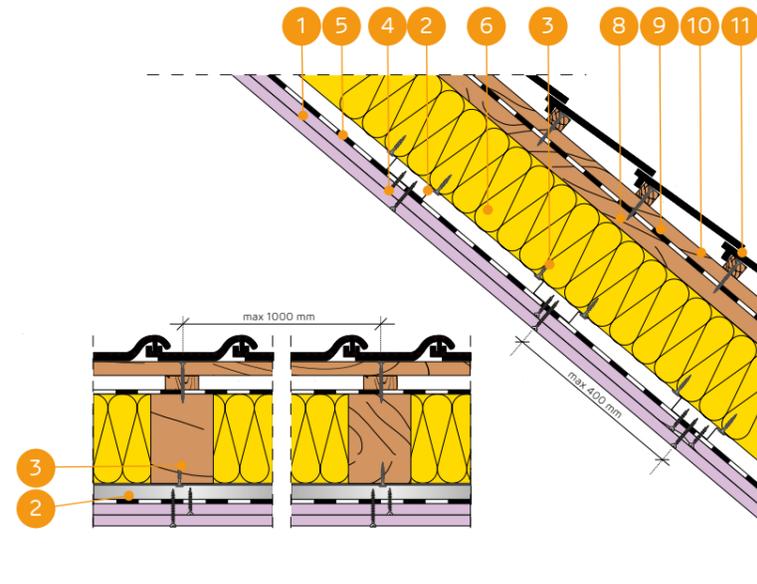

Fire classification:
LBO-039-KZ/21

SYSTEMS:
PK/25; PK/30; PK/37,5

MATERIALS:

1. Nida plasterboard
2. Nida PK48 profile
3. Nida 3.5x35 mm wood screws
4. Nida sheet metal screws
5. Vapour barrier
6. Insulation material mineral wool
7. The joint between the plasterboards filled with the e.g. Nida Start gypsum putty and Nida reinforcement tape + Nida Finish gypsum putty
8. Roof truss structure
9. Vapour-open membrane
10. Timber structure for roofing (battens, counter-battens)
11. Roofing

THE INCLINED ROOF ENCASEMENT SYSTEM ON THE NIDA PK48 TOP-HAT PROFILES IN THE PARALLEL ARRANGEMENT (DIRECT ANCHORING)

¹⁾ The heat transfer coefficient for the 200 mm thick mineral wool.

²⁾ The weight does not include the weight of the insulation material.

³⁾ Fire classification LBO-039-KZ/21.

⁴⁾ It is advised to apply the Nida Hydro plaster-fibre boards in the areas with the relative air humidity up to 85% and in the corner sections where intensive influence of water is expected (the horizontal and vertical surfaces in the vicinity of baths, showers, etc.)

CONSUMPTION OF MATERIALS PER 1M² FOR THE INCLINED ROOF ENCASEMENT CONSTRUCTED ACCORDING TO THE NIDA DACH SYSTEM

⁵⁾ As an alternative the Nida Woda should be utilised.

⁶⁾ As an alternative the Nida Woda Ogień Plus should be utilised.

⁷⁾ The type of the anchoring element should be selected individually adequately for the substrate type and the total mass of the encasement.

⁸⁾ For the Nida Twarda plaster-particle boards with fibres the Nida Max gypsum putty should be utilised.

⁹⁾ Application acc. to the requirements.

The standards concerning the amount of utilised material do not cover the loss of the material.
