

smoke barriers

„The Siniat smoke barriers are provided in order to prevent free spread of smoke and gases generated by a fire in large rooms, such as production halls, warehouses, atria, or shopping centres. By dividing a bigger area into subzones, the barriers provide control over spread of smoke and heat, owing to which it is possible to separate the individual areas where smoke is supposed to gather from those which should remain free from smoke, which makes evacuation possible. The barriers manufactured by Siniat are made of the specialised Resistex boards, which

enable constructing suspended partitions meeting the criteria of the DH60 to DH150 classes in the conditions of a standard fire. In some buildings the smoke and heat extraction system is ineffective when not accompanied by smoke barriers, this is why the specialists of Siniat have developed the highest class of systems protecting health and life of people who currently are staying in buildings during occurrences of fire. The smoke barriers developed by Siniat were constructed and tested according to standard PN-EN12101-1, and subsequently marked with the CE marking.”

SYSTEMS:
75/UAR50/12,5

MATERIALS:

1. Resistex plasterboard
2. Nida UAR50 / UAR75 / UAR100 profile
3. Nida U50 / U75 / U100 bottom profile
4. Nida U50/80 / U75/80 / U100/80 top profile
5. Expansion plug
6. Nida screws for 2 mm thick sheet metal
7. The joint between the plasterboards filled with the Nida gypsum compound with the Nida reinforcement tape
8. Nida acoustic tape or mineral wool
9. Anchoring element (kind and type selected depending on load and substrate type) with expanded steel washer
10. FLAT HEAD 4.2x13 mm self-drilling screw for 1 mm sheet metal
11. Nida angle profile for UA50 / UA75 / UA100 profile
12. FLAT HEAD M8 bolt with serrated nut

THE SYSTEM OF SMOKE BARRIERS ON THE NIDA UAR50 LOAD-BEARING STRUCTURE

TECHNICAL PARAMETERS
